Cursos y Training

[cursos](#), [coursera](#), [mooc](#), [training](#)

Metodología con alumnos de prácticas.

En el documento excel compartido (spreadsheet), se indica el nombre y el email del alumno para que podáis enviarle un email a cada uno indicando la documentación y los enlaces que deben usar para las prácticas.

Para comenzar las prácticas, hay una primera parte de formación en la tecnología interesada mediante cursos online, videos y documentación. Para esta primera fase, revisar la siguiente página de la wiki donde hay enlaces a cursos y videos específicos para cada tecnología. Aunque podéis añadir más enlaces a la wiki. `public:training:homepage` [OdinS Wiki]

Por favor, enviar un email a cada alumno para explicar su prácticas y los enlaces iniciales que deben usar con cursos, videos, u otros recursos.

Luego la segunda fase, será sobre investigar y probar herramientas software de código abierto que tenéis que aportar los enlaces a los repositorios Github o similar que deben descargar y probar.

Recordar que usamos una metodología ágil para gestionar las prácticas con reuniones online bisemanales, y comunicación vía email para resolver dudas urgentes o bloqueantes donde los alumnos son quien dedican el mayor tiempo y nosotros lo mínimo posible. Debéis acordar con los alumnos para organizar la reunión bisemanal y el enlace online. Por favor, invitarme a dichas reuniones por si pudiera participar.

Además, ellos deben usar las herramientas compartidas para que vayan apuntando las horas en el excel compartido, la wiki para ir documentando y el gitlab como repositorio de código. Antes de cada reunión, hay que echarle un vistazo a la wiki y excel y gitlab para ver si han avanzado algo y si tiene coherencia con lo que comenten en la reunión. <https://wiki.odins.es/> <https://gitlab.odins.es/>

Gaia-X Governance Framework

Gaia-X Association covers three pillars: Compliance: for a common digital governance based on European values. Federation: enables interoperable & portable (Cross-) Sector data-sets and services. Data exchange: A mean to perform data exchange and anchor data contract negotiation results into the infrastructure. Each pillar will have one or more artefacts in the form of Specifications, Software and Label.

For further details please browse here. <https://docs.gaia-x.eu/framework/>
<https://docs.gaia-x.eu/framework/?tab=software>

Gaia-X Lab Compliance Service.

https://gitlab.com/gaia-x/lab/compliance/gx-compliance/-/tree/v1.0.0?ref_type=tags

Gaia-X Lab Registry. https://gitlab.com/gaia-x/lab/compliance/gx-registry/-/tree/v1.0.0?ref_type=tags

GXDCH (Gaia-X Digital Clearing House) - the one-stop place to go and get verified against the Gaia-X rules to obtain compliance in an automated way. The GXDCH is the necessary element to operationalize Gaia-X in the market. The Gaia-X Framework describes functional specifications, technical requirements, and SW assets necessary to be Gaia-X compliant. The GXDCH are a network of execution nodes for the compliance components that we have developed. This safeguards the distributed, decentralised ways of running the Gaia-X compliance, not operated centrally by the Association, and where anybody can benefit from the open, transparent, and secure federated digital ecosystem - thus making the Gaia-X mission a reality. <https://gaia-x.eu/gxdch/>
<https://docs.gaia-x.eu/framework/?tab=clearing-house>

The Gaia-X Digital Clearing House (GXDGH) is the mechanism through which Gaia-X is operationalised in the market. The Gaia-X Framework contains functional specifications, technical requirements, and the software to use to become Gaia-X compliant and/or Gaia-X compatible. The GXDCH contains a subset of the software components in the Gaia-X Framework: the mandatory components and some of the optional ones.

<https://docs.gaia-x.eu/framework/?tab=software> <https://gitlab.com/gaia-x/lab/gxdch>
<https://gitlab.com/gaia-x/lab>

<https://gitlab.com/gaia-x/lab/compliance>

Gaia-X - 1 - Compliance Service. Compliance service enforcing rules defined in the TrustFramework - Architecture Document/Compliance Document. Gaia-X - 2 - Registry. Source of truth for the Compliance engine, validating certificate are conforming to rules, providing shapes, schemas and trusted sources. Gaia-X - 3 - Notary - registrationNumber. Notarization API to get a Legal Registration Number used to get compliance Gaia-X - 4 - IPFS Pinning Service. This project helps pushing and pinning on IPFS the registry static files, shapes, context, ontology, revoked issuers and trusted clearing houses. Gaia-X - 5 - Trust Anchor Service. Service building, signing and pushing on IPFS the Gaia-X AISBL trusted anchors list

<https://gitlab.com/gaia-x/lab/libraries>

Libraries to generate and validate DID, sign Gaia-X credentials using JWS 2020, and a ETSI 119 612 serializer for Gaia-X's trusted anchors

Gaia-X did-verifier. A JavaScript library to verify DIDs and their verification methods against a registry Gaia-X did-web-generator. Javascript library allowing to generate `{} DID.json` file through public key `{} and domain name Gaia-X json-web-signature-2020`. A lightweight JsonWebSignature2020 signing and verification Typescript library by Gaia-X AISBL Gaia-X jsonld-http-client. Simple HTTP client replacement for `@digitalbazaar/http-client` using axios and without relying on ky nor wasm Gaia-x Trusted List Serializer.

Eclipse GAIA-X and DataSpaces

Post-Quantum Cryptography (PQC) - Security

Due to recent development in quantum computing, the invention of a large quantum computer is no longer a distant future. Quantum computing severely threatens modern cryptography, as the hard mathematical problems beneath classic public-key cryptosystems can be solved easily by a sufficiently large quantum computer. As such, researchers have proposed PQC based on problems that even quantum computers cannot efficiently solve. Generally, post-quantum encryption and signatures can be hard to compute. This could potentially be a problem for IoT, which usually consist lightweight devices with limited computational power. There are existing literature on the performance for PQC in resource-constrained devices to understand the severeness of this problem. It exists recent proposals to optimize PQC algorithms for resource-constrained devices.

Online videos and courses about PQC.

Post-Quantum Cryptography for Internet of Things: A Survey on Performance and Optimization.

<https://arxiv.org/abs/2401.17538>

PQ-TLS-Test is a project dedicated to testing post-quantum TLS (PQ-TLS) in PQ-hybrid schemes on both general-purpose computer systems and embedded systems. The project aims to provide comprehensive insights into the performance of post-quantum cryptography (PQC) by evaluating various handshake modes, client scales, and network topologies.

Claude - ChatGPT for programming

Claude se basa en sonet3.5 y en claude.ai, hay una interfaz similar a chatgpt, pero para que sea ya mucho más útil hay que ir directamente a la empresa anthropic y solicitar una api key y saltarse la interfaz web grafica

En <https://console.anthropic.com/> ya se puede uno registrar y crear keys y con la apikey y metiendole saldo ya tenemos para configurar la extensión de vscode y hacer preguntas desde allí la extensión sale en los vídeos que es claude-dev pero ahora ha cambiado el nombre a cline

Lo que hay que buscar en youtube es "claude.ai en vscode"

https://www.youtube.com/watch?v=E_yTAau--sE <https://www.youtube.com/watch?v=CoHSHOyITlc>

<https://www.youtube.com/watch?v=ic9905SMPzk>

claude va perfecto a día de hoy pero lo mismo en 1 mes sale otro mejor

EU research project management

Aquí tienes un curso gratuito de 1 hora que explica aspectos claves a entender sobre la participación, gestión y justificación de los proyectos I+D EU.

A continuación, podéis encontrar el enlace al curso y también están los vídeos subidos a Youtube. Recomiendo sobre todo, el capítulo 2 y el capítulo 4.

Free Tutorial - Horizon Europe: from proposal stage to project management | Udemy
<https://www.udemy.com/course/horizon-europe-project-management/>

- Introduction to the MOOC, given by Laura Gómez (ICCRAM-UBU).
- Chapter 1: Horizon Europe Framework, by Raquel Moreno (AXIA Innovation).
- Chapter 2: Project management models, by Laura Gómez (ICCRAM-UBU).
<https://youtu.be/aYSPUf0Yoak?feature=shared>
- Chapter 3: Successful proposal writing, by Sonia Martel (ICCRAM-UBU).
<https://www.youtube.com/watch?v=LBhAR5VM-us>
- Chapter 4: EU Project Management, by Laura Gómez (ICCRAM-UBU).
<https://youtu.be/LA7Zf74jKqE?feature=shared>
- Chapter 5: Exploitation and IPR management, by Raquel Moreno (AXIA Innovation)
- Chapter 6: Communication and dissemination management, by Beatriz Lapuente (ICCRAM-UBU)

Además, se comparte una guía que explica la participación en proyectos I+D EU, no hace falta leerlo completamente aunque sobre todo tiene un glosario al final donde podéis ver los principales términos y conceptos claves que se usan en los proyectos I+D EU. Y consultarlo cada vez que escuches o leas un término que no conocéis. PM², Project management methodology - Publications Office of the EU (europa.eu)

<https://op.europa.eu/en/publication-detail/-/publication/ac3e118a-cb6e-11e8-9424-01aa75ed71a1>

A nivel más experto, hay un manual online que explica en detalle cómo usar el portal EU para solicitar, gestionar, justificar los proyectos y explica las principales acciones que se realizan durante todo el tiempo de vida de un proyecto EU.

https://ec.europa.eu/research/participants/docs/h2020-funding-guide/index_en.htm

The image shows a screenshot of the 'H2020 Online Manual' website. On the left is a blue navigation menu with the following items: 'My Area - User account & roles' (with sub-items 'EU Login', 'Roles & access rights', 'Terms and Conditions of Use'), 'Grants' (with sub-items 'Applying for funding', 'Find a call' (with sub-items 'Horizon 2020 structure and budget', 'What you need to know about Horizon 2020 calls'), 'Find partners or apply as individual', 'Register in the Participant Register' (with sub-items 'Registration of your organisation', 'LEAR appointment', 'Validation of potential beneficiaries', 'Bank account validation')). The main content area is titled 'Grants' and is divided into three sections: 'Applying for funding' (with steps: 'Find a call', 'Find partners', 'Register an organisation', 'Submit a proposal'), 'Evaluation & Grant signature' (with steps: 'Admissibility and eligibility check', 'Evaluation of proposals', 'Grant preparation', 'Grant signature'), and 'Grant management' (with sub-sections: 'Keeping records', 'Amendments', 'Reports & payment requests', 'Deliverables', 'Dissemination & exploitation', 'Communicating your project', 'Acknowledgement of EU funding', 'Checks, audits, reviews & investigations').

C Programming

- King, "C Programming A Modern Approach"
 - Especialmente interesantes los capítulos 10 y 15 sobre compilación de programas por módulos (varios archivos .c).
- Hook, "Write portable code: an introduction to developing software for multiple platforms.", 2005, [Online]. Available:
http://books.google.com/books?hl=en&lr=&id=4VOKcEAPPO0C&oi=fnd&pg=PR15&dq=Write+Portable+Code:+A+Introduction+to+Developing+Software+for+Multiple+Platforms&ots=WE_oO8Cv2X&sig=TWzivvIW8jA98rvXXPzPbnLI-28.

Networking

- Use of [Scapy](#) for interactive network packet manipulation.

MOOCs

Coursera, EdX y Udemy

- Si te da muchos problemas la plataforma web de COURSERA para los cursos gratuitos, puedes buscar cursos similares en la web EdX, Udemy.

Massive Open Online Course (MOOC) is an online course aimed at unlimited participation and open access via the Web. In addition to traditional course materials, such as filmed lectures, readings, and problem sets, many MOOCs provide interactive courses with user forums or social media discussions to support community interactions among students, professors, and teaching assistants (TAs), as well as immediate feedback to quick quizzes and assignments.

Among the most popular platforms are Coursera and EDX.

Git MOOCs

IMPORTANT course with some guides about git submodules. GIT: Free Git Tutorial - Git: Become an Expert in Git & GitHub in 4 Hours. Udemy <https://www.udemy.com/course/git-expert-4-hours/> Good practices with Git repository. https://wiki.odins.es/research/good_practices/home

- **NOTE** both the command line and a graphical interface tool are covered. It is **strongly** advised to learn how to use the **command line** and skip the graphical interface tool sections.

Alternativas en Español - <https://www.coursera.org/learn/git-espanol> - <https://www.udemy.com/course/git-desde-cero/>

IoT MOOCs

Cursos gratuitos sobre introducción a IoT en udemy o edx.org. 1. CurtinX: Introduction to the Internet

of Things (IoT) | edX.

<https://www.edx.org/learn/iot-internet-of-things/curtin-university-introduction-to-the-internet-of-things-iot> 2. Free Internet of Things (IoT) Tutorial - Introduction to Internet of Things and Cloud | Udemy.
<https://www.udemy.com/course/a4iot-intro-iot-cloud/>

Instalation of ESP32 programming environment

Follow the steps indicated in this wiki [page](#) to start programming the ESP32 device and solve the principal errors obtained during the configuration.

ChatBot - LLM - NLP - procesamiento de lenguaje natural.

Te envío algunas propuestas de cursos y guías sobre procesamiento de lenguaje natural que creo que pueden ser interesantes. Como hablamos ayer, siempre puedes buscar otros por tu cuenta, sobre todo conforme vayas sumergiéndote en los desarrollos para entender mejor algunos conceptos o descubrir nuevas técnicas.

Estos dos son más genéricos, para una primera introducción:

<https://www.udemy.com/course/introduction-to-natural-language-processing-nlp-llm-ai-gate-moyyn/>

<https://www.udemy.com/course/natural-language-processing-python-nlp/>

Este de aquí se centra en las técnicas de zero-shot, few-shot y chain of thought:

<https://developers.google.com/machine-learning/resources/prompt-eng?hl=es-419>

Este es para que veas el funcionamiento de Hugging Face, aunque ya me dijiste que lo conocías:

<https://www.coursera.org/projects/open-source-models-with-hugging-face?action=enroll>

Y este último es sobre algunas métricas de evaluación:

<https://unite.ai/es/evaluaci%C3%B3n-de-modelos-de-lenguaje-grandes-una-gu%C3%ADa-t%C3%A9cnica/>

AI/ML para Python.

Back-End y Front-End

- NODE-RED. Para realizar el backend de comunicaciones Node-RED (nodered.org).
<https://nodered.org/>
- MONGODB. Como base de datos para el backend. MongoDB Documentation
<https://docs.mongodb.com/>
- GRAFANA. - El frontend para visualizar los datos. Grafana: The open observability platform | Grafana Labs <https://grafana.com/>

Puedes encontrar videos en Youtube y manuales en internet que explican como combinar esas herramientas para crear tu propio backend y frontend.

- Grafana showing MQTT data served by NodeRED - YouTube <https://www.youtube.com/watch?v=9nZtiwD8wGc>
- MongoDB dashboard for Grafana | Grafana Labs <https://grafana.com/grafana/dashboards/2583>
- NODE RED | MONGODB CONNECTION USING NODE RED - YouTube <https://www.youtube.com/watch?v=zRRQCEov-4Q>
